Academic Year: 2025-26

Semester: V

Class / Branch/ Div: TEIT C

Subject: ADL Lab

Name of Instructor: Prof. Vishal Badgajar

Name of Student: Shreya Sonawale

Student ID: 23104134

Roll No. 43

Date of Submission: 25/07/25

Experiment No: 2

Aim: To Build Your Application using AWS Code Build and Deploy on S3 / SEBS using AWS Code Pipeline, deploy Sample Application on EC2 instance using AWS Code Deploy

Code & Output:

The screenshot displays the AWS Management Console interface for creating a new S3 bucket. The breadcrumb navigation shows 'Amazon S3 > Buckets > Create bucket'. The 'Create bucket' page includes a description: 'Buckets are containers for data stored in S3.' The 'General configuration' section is expanded, showing the 'AWS Region' as 'Asia Pacific (Mumbai) ap-south-1'. Under the 'Bucket type' section, the 'General purpose' option is selected, with a description: 'Recommended for most use cases and access patterns. General purpose buckets are the original S3 bucket type. They allow a mix of storage classes that redundantly store objects across multiple Availability Zones.' The 'Directory' option is also visible but not selected. The 'Bucket name' field is populated with 'store-build-artifact-ss'. Below the name field, a note states: 'Bucket names must be 3 to 63 characters and unique within the global namespace. Bucket names must also begin and end with a letter or number. Valid characters are a-z, 0-9, periods (.), and hyphens (-). Learn More'. At the bottom of the configuration section, there is a 'Choose bucket' button. The footer of the console shows 'CloudShell', 'Feedback', and copyright information for Amazon Web Services, Inc. or its affiliates.

The screenshot shows the AWS Management Console interface for the 'Buckets' page. At the top, there's a green notification bar stating 'Successfully created bucket "deployment-bucket-pwa-ss"'. Below this, the 'General purpose buckets' tab is selected, showing a list of buckets. The table lists two buckets: 'deployment-bucket-pwa-ss' and 'store-build-artifact-ss', both in the 'Asia Pacific (Mumbai) ap-south-1' region. To the right, there are sections for 'Account snapshot' and 'External access summary'. The footer includes 'CloudShell', 'Feedback', and copyright information for Amazon Web Services, Inc.

Name	AWS Region	Creation date
deployment-bucket-pwa-ss	Asia Pacific (Mumbai) ap-south-1	July 25, 2025, 13:34:46 (UTC+05:30)
store-build-artifact-ss	Asia Pacific (Mumbai) ap-south-1	July 25, 2025, 13:31:39 (UTC+05:30)

The screenshot shows the AWS Management Console interface for the 'CodeBuild' page. The left sidebar shows the 'Developer Tools' section with 'CodeBuild' selected. The main content area shows the 'Build projects' section, which is currently empty, displaying 'No results' and 'There are no results to display.' The top navigation bar includes 'Developer Tools', 'CodeBuild', and 'Build projects'. The footer includes 'CloudShell', 'Feedback', and copyright information for Amazon Web Services, Inc.

The screenshot shows the 'Source 1 - Primary' configuration page in the AWS CodeBuild console. The 'Source provider' is set to 'GitHub'. The 'Credential' section shows a green checkmark indicating the account is successfully connected through OAuth using a CodeBuild managed token. The 'Repository' section has three options: 'Repository in my GitHub account' (selected), 'Public repository', and 'GitHub scoped webhook'. The repository URL is 'https://github.com/Shreyaa1727/Car-pwa-deploy-on-aws.git'. The 'Source version' section is optional and currently empty. The 'Additional configuration' section is expanded, showing options for 'Git clone depth', 'Git submodules', and 'Build status config'.

The screenshot shows the 'Environment' configuration page in the AWS CodeBuild console. The 'Provisioning model' is set to 'On-demand'. The 'Environment image' section has two options: 'Managed image' (selected) and 'Custom image'. The 'Compute' section has two options: 'EC2' (selected) and 'Lambda'. The 'Running mode' section has two options: 'Container' and 'Instance' (selected). The 'Operating system' is set to 'Amazon Linux'.

Department of Information Technology

(NBA Accredited)

Conclusion: In this experiment, we created two buckets named as store-build-artifact-ss and deployment-bucket-pwa-ss . Also we successfully created a fully automated continuous deployment pipeline using AWS CodePipeline. By integrating GitHub, Amazon S3, and CodeBuild as the source .We built a simple pipeline that deploys code changes automatically. This setup demonstrates the power of automation in cloud-based application delivery, reducing manual effort and ensuring faster, consistent deployments.
